## Problem Space

### Core Problem

Students in digital learning environments experience a range of emotional states (frustration, confusion, boredom, etc.) while studying. These emotions directly impact their ability to absorb and retain knowledge. However, existing EdTech platforms treat all students identically - delivering the same content regardless of the learner's current emotional or cognitive state.

### Pain Points Validated

| Pain Point                                                           | Validation Source                                                   |
|----------------------------------------------------------------------|---------------------------------------------------------------------|
| Students cannot identify why they are stuck                          | User interviews with engineering students                           |
| Generic help resources don't address emotional context               | Analysis of existing EdTech platforms                               |
| No 24/7 empathetic support available                                 | Survey: 78% of students study after 10 PM with no peer/tutor access |
| Delayed feedback loop between student struggle and teacher awareness | Educator interviews                                                 |

## Solution Space

### Our Solution: Emotion Detector Platform

An AI-powered web application that:

- Accepts student's free-text description of their study problem
- Detects emotional state using BiLSTM + BERT ensemble + rule-based keyword engine
- Generates personalized learning guidance using Google Gemini AI
- Logs and visualizes emotional trends over time

| Customer Problem                | Solution Feature                             | Fit Score (1-5) |
|---------------------------------|----------------------------------------------|-----------------|
| Can't identify emotional state  | Automatic emotion classification (5 classes) | 5               |
| Generic help doesn't match mood | Gemini generates emotion-specific            | 5               |
| No empathetic response          | 5-section structured guidance with           | 5               |
| No 24/7 support                 | Always-online Streamlit Cloud deployment     | 5               |
| No trend visibility             | Analytics dashboard with session history     | 4               |
| Unsure if approach is correct   | Study technique recommendations in           | 4               |
| Overall Fit Score: 28/30 (93%)  | guidance                                     |                 |

Value Proposition
